

Theme – Long Exposure

Title	Comment	Result
Brisbane at night	Great composition and colour. The time of day has been well chosen to show the detail in the sky. Could have considered a slightly shorter shutter speed to avoid some of the very bright areas in the water.	M
Lights at night	Effective use of slow shutter speed and the mono treatment has been well executed.	M
Dawn Photographers	Beautiful light. Would have been good to see both photographers' faces. The water in the opening through the rocks seems a little unnatural and is a little distracting...could be a post processing issue.	HC
Travelling Light	Interesting idea. Could try a deeper DOF and a low ISO for a more defined result.	A
Not identical twins	Very good use of slow shutter speed and appealing scene.	H
Night by the Lake	Well composed and the silhouette is well placed in the frame. Could have considered a shorter shutter speed to increase the clarity. Also take into consideration the angle of the lens with ground...the deeper the angle the less atmospheric interference.	HC
Dawn Serenity	Great sense of peace and an appropriate shutter speed. Could bring out a little more clarity in the rocks.	M
Dizzy	Good choice of shutter speed and sharp in the right places.	H
Speeding thru the City	Great idea. Could have tried a faster shutter speed to achieve more clarity and defined shapes.	A
Treble Clef	Appealing sense of movement. Could consider a shorter shutter speed to bring out sharper and more defined shapes.	A
Urangan Pier	Wonderful sense of mystery in the sky. Could try a short shutter speed to avoid the blown out areas under the lights.	HC
